## 1. About This Release

PuTTY is a popular open-source client on Windows and UNIX-based computers that provides access to remote machines using well-known network protocols such as Telnet, SSH, rlogin and raw TCP. However, it does not support Kerberos authentication.

Centrify has enhanced PuTTY so that user authentication can be accomplished using Kerberos before establishing a remote connection. The Centrify-enhanced version of PuTTY takes advantage of the Kerberos environment that the Centrify DirectControl agent sets up automatically on managed UNIX and Linux computers. By using the Centrify PuTTY client to access Centrify-managed computer, you gain the benefits of centralized authentication and password policy enforcement using a secure and well-established authentication infrastructure.

Centrify PuTTY is currently integrated with open source PuTTY version 0.71.

The Centrify Zero Trust Privilege Services and PuTTY release notes and documents are available online at <http://docs.centrify.com>.

## 2. Feature Changes

### 2.1. Feature Changes in Centrify PuTTY 5.6.0

- Centrify PuTTY is upgraded based on PuTTY v0.71 instead of v0.70. (Ref: CS-47817)
  - This includes several security fixes, e.g. CVE-2019-9894, and CVE-2019-9895, CVE-2019-9896, CVE-2019-9897, and CVE-2019-9898. For details, please refer to <https://www.chiark.greenend.org.uk/~sgtatham/putty/changes.html>.

### 2.2. Feature Changes in Centrify PuTTY 5.5.2

- N/A

## 3. Bugs Fixed

### 3.1. Bugs Fixed in Centrify PuTTY 5.6.0

- N/A

### 3.2. Bugs Fixed in Centrify PuTTY 5.5.2

- N/A

## 4. Known Issues

- puttytel does not support Kerberos authentication.
- If you specify Alternate Kerberos credentials on the SSH > Kerberos properties page, you will always be prompted for a password. This will happen even if you choose to remember the password when first prompted for it.
