About this guide

Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service is a multi-tier software solution that enables administrators to centrally manage access to on-premise servers and workstations, mobile devices, and applications across a broad range of platforms. Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events record login and privilege activity on Windows, UNIX, and Linux computers. The formatting of these audit events logs are similar to a common event format (CEF).

Intended audience

This guide is for individuals who need to extract audit event information from UNIX and Linux syslogs and Windows application event logs. Additionally, this information is available in the Centrify Audit Analyzer. Audit events are organized into categories in the Audit Analyzer and these categories are identified in this document.

Using this guide

Depending on your environment and role as an administrator or auditor, you may want to read portions of this guide selectively. This guide provides the following information:

- Overview of Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events provides an overview of how to read audit events.

- Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events identifies the different audit event categories. Each audit event includes a sample log with an explanation of how to read the log as well as a list of the available audit events.

• • • • • •

Intended audience

This guide is for individuals who need to extract audit event information from UNIX and Linux syslogs and Windows application event logs. Additionally, this information is available in the Centrify Audit Analyzer. Audit events are organized into categories in the Audit Analyzer and these categories are identified in this document.

Using this guide

Depending on your environment and role as an administrator or auditor, you may want to read portions of this guide selectively. This guide provides the following information:

- Overview of Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events provides an overview of how to read audit events.

- Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events identifies the different audit event categories. Each audit event includes a sample log with an explanation of how to read the log as well as a list of the available audit events.

Documentation conventions

The following conventions are used in Centrify documentation:

- `Fixed-width` font is used for sample code, program names, program output, file names, and commands that you type at the command line. When *italicized*, this font indicates variables. Square brackets (`[ ]`) indicate optional command-line arguments.

- **Bold** text is used to emphasize commands or key command results; buttons or user interface text; and new terms.

- *Italics* are used for book titles and to emphasize specific words or terms. In fixed-width font, italics indicate variable values.

- Standalone software packages include version and architecture information in the file name. Full file names are not documented in this

guide. For complete file names for the software packages you want to install, see the distribution media.

- For simplicity, UNIX is used to refer to all supported versions of the UNIX and Linux operating systems. Some parameters can also be used on Mac OS X computers.

Finding more information about Centrify products

Centrify provides extensive documentation targeted for specific audiences, functional roles, or topics of interest. If you want to learn more about Centrify and Centrify products and features, start by visiting the Centrify website. From the Centrify website, you can download data sheets and evaluation software, view video demonstrations and technical presentations about Centrify products, and get the latest news about upcoming events and webinars.

For access to documentation for all Centrify products and services, visit the Centrify documentation portal at docs.centrify.com. From the Centrify documentation portal, you can always view or download the most up-to-date version of this guide and all other product documentation.

For details about supported platforms, please consult the release notes.

For the most up to date list of known issues, please login to the Customer Support Portal at http://www.centrify.com/support and refer to Knowledge Base articles for any known issues with the release.

Product names

Over the years we've made some changes to some of our product offerings and features and some of these previous product names still exist in some areas. Our current product offerings include the following services:

Current Overall Product Name	Current Services Available
Centrify Zero Trust Privilege Services	Privileged Access Service
	Gateway Session Audit and Monitoring
	Authentication Service
	Privilege Elevation Service
	Audit and Monitoring Service
	Privilege Threat Analytics Service

Whether you're a long-time or new customer, here are some quick summaries of which features belong to which current product offerings:

Previous Product Offering	Previous Product Offering	Description	Current Product Offering
	Centrify Privileged Service (CPS)		Privileged Access Service
DirectControl (DC)			Authentication Service
DirectAuthorize (DZ or DZwin)			Privilege Elevation Service
DirectAudit (DA)			Audit and Monitoring Service
	Infrastructure Services		Privileged Access Service, Authentication Service, Privilege Elevation Service, Audit and Monitoring Service, and Privilege Threat Analytics Service
DirectManage (DM)	Management Services	Consoles that are used by all 3 services: Authentication Service, Privilege Elevation Service, and Audit and Monitoring Service	
DirectSecure (DS)	Isolation and Encryption Service		Still supported but no longer being developed or updated
	User Analytics Service		Privilege Threat Analytics Service

● ● ● ● ● ●

Depending on when you purchased a Centrify product offering, you may have purchased one of the following product bundles:

Previous Product Bundle	Previous Product Bundle	Current Product Bundle	Services Included	Description
		Centrify Zero Trust Privilege Services Core Edition	Privileged Access Service and Gateway Session Audit and Monitoring	
Centrify Server Suite Standard Edition	Centrify Infrastructure Services Standard Edition	Centrify Zero Trust Privilege Services Standard Edition	Privileged Access Service, Authentication Service, and Privilege Elevation Service	
Centrify Server Suite Enterprise Edition	Centrify Infrastructure Services Enterprise Edition	Centrify Zero Trust Privilege Services Enterprise Edition	Privileged Access Service, Authentication Service, Privilege Elevation Service, Audit and Monitoring Service (includes Gateway Session Audit and Monitoring)	
Centrify Server Suite Platinum Edition				Discontinued bundle that included DirectControl, DirectAuthorize, DirectManage, DirectAudit, and DirectSecure

Contacting Centrify

You can contact Centrify by visiting our website, www.centrify.com. On the website, you can find information about Centrify office locations worldwide, email and phone numbers for contacting Centrify sales, and links for following Centrify on social media. If you have questions or comments, we look forward to hearing from you.

• • • • • •

Getting additional support

If you have a Centrify account, click Support on the Centrify website to log on and access the Centrify Technical Support Portal. From the support portal, you can search knowledge base articles, open and view support cases, download software, and access other resources.

To connect with other Centrify users, ask questions, or share information, visit the Centrify Community website to check in on customer forums, read the latest blog posts, view how-to videos, or exchange ideas with members of the community.

• • • • • •

Overview of Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events

To familiarize yourself with the elements of audit event logs, read the explanations of Windows and UNIX/Linux audit events, and then review how to read Centrify audit event data.

Windows and UNIX/Linux Audit Events

Review the following examples to understand the Windows and UNIX/Linux audit event logs, and then review How to read Centrify audit event data to understand the similarities and differences.

Windows Audit Event Log Line Example

The following is an example of a Centrify audit event recorded in the Windows application event log. Standard Windows audit event fields (in black) contain information about the Centrify event. Centrify augments these standard fields with additional data (in red) to help you to track logon and privilege activity data.

```
04/05/2016 02:15:37 PM LogName=Application
SourceName=Centrify AuditTrail V2 EventCode=6003

	authMechanism	keyboard-interactive
	client	192.168.81.11
	sshRights	shell
	command	(none)

How to read Centrify audit event data

The following information can help you understand how to read Centrify audit events.

• • • • • •

Event ID / CentrifyEventID

Every Windows and UNIX/Linux audit event includes two numeric IDs that describe the event. The `Event ID` in the header fields identifies the unique ID of the event within a particular event category, whereas the `centrifyEventID` in the common fields identifies the unique ID among all Centrify audit event types.

Windows example

Centrify audit event header fields	Category	privilege elevation service - Windows
	Product Version	1.0
	Event ID	3
	Event Name	Remote login success
	Severity	5
Centrify audit event common fields	user	administrator@member.centrify.vms
	userSid	S-1-5-21-3789923312-3040275127-1160560412-500
	DAInst	AuditingInstallation
	DASessID	c72252aa-e616-44ff-a5f6-d3f53f09bb67
	sessionId	6
	centrifyEventID	6003

UNIX/Linux example

Centrify audit event header fields	Event Type	AUDIT_TRAIL
	Product	Centrify Suite
	Category	Centrify sshd
	Product Version	1.0
	Event ID	100
	Event Name	SSHD granted
	Severity	5

Centrify audit event common fields	user	dwirth(type:ad,dwirth@CENTRIFY.VMS)
	pid	7456
	utc	1459784055479
	centrifyEventID	27100
	DAInst	AuditingInstallation
	DASessID	c72252aa-e616-44ff-a5f6-d3f53f09bb67
	status	GRANTED
	service	ssh-connection

Severity

Severity is defined by an integer from 0 - 10, with 10 being the most important level. Centrify events are typically a Severity 5.

Spacing

A field name is one word (no spaces) in the audit event file. When the file is processed into a readable format, spaces are added to field names. For example, if you need to search for Management Database Property, you should search on the following term: managementdatabaseproperty.

Case-insensitive field names

Use case-insensitive field names in all search filters.

Configuring the audit event log location

You can configure audit event logs to go to DirectAudit or your system's default logging system (Windows event log or UNIX syslog). You configure the log location either manually for each computer or by way of group policy.

You can also configure a global audit event logging behavior or specify different settings for different feature areas.

• • • • • •

Configuring the audit event logging location by group policy

Audit trail group policies are located in category-specific subfolders (such as **Audit Analyzer Settings**, **Audit Manager Settings**, and so on). Additionally, a **Centrify Global Settings** subfolder contains group policies that you can set at a global level.

Any category-specific audit trail targets that you set (for example, **Audit Manager Settings > Send audit trail to log file**) override global audit trail targets (for example, **Centrify Global Settings > Send audit trail to log file**). Each subfolder in **Centrify Audit Trail Settings** contains the same set of group policies.

> **Note:** To send audit trail events to both the database and the local logging facility, enable both of these group policies.

Send audit trail to Audit database

Enable this group policy to specify that audit events for this component —**Audit Analyzer**, **Audit Manager**, and so on—are sent to the active audit store database.

See the **Explain** tab in the group policy for details about which parameter each group policy sets in the agent configuration file.

Send audit trail to log file

Enable this group policy to specify that audit events for this component— such as **Audit Analyzer**, **Audit Manager**, and so on—are sent to the local logging facility (syslog on UNIX systems, Windows event log on Windows systems).

See the **Explain** tab in the group policy for details about which parameter each group policy sets in the agent configuration file.

Set global audit trail targets

Specify the target for audit trail information.

If you set this group policy to **Not configured** or **Disabled**, the destination of audit trail information depends on which version of DirectAudit is installed. If DirectAudit 3.2 or later is installed, audit trail information is sent to the local logging facility and DirectAudit. If a DirectAudit version earlier than 3.2 is installed, audit trail information is only sent to the local logging facility.

• • • • • •

If you set this group policy to **Enabled**, you can specify the target for audit trail information. Possible settings are:

- 0 (Audit information is not sent.)

- 1 (Audit information is sent to Centrify Audit & Monitoring Service. This capability is supported by DirectAudit version 3.2 and later.)

- 2 (Audit information is sent to the local logging facility, either syslog on UNIX systems or Windows event log on Windows systems.)

- 3 (Audit information is sent to both DirectAudit and the local logging facility.)

This group policy modifies the `audittrail.targets` setting in the agent configuration file.

Configuring the global audit event logging location manually on Windows systems

To manually specify the target for audit trail information on a Windows computer, edit the following Windows registry key:

`HKEY_LOCAL_MACHINE > SOFTWARE > Centrify > AuditTrail > AuditTrailTargets`

The values are as follows:

- 0 (audit trail is disabled)

- 1 (the audit trail log goes to DirectAudit)

- 2 (the audit trail log goes to the Windows event log)

- 3 (the audit trail log goes to both DirectAudit and the Windows event log)

   Note: If you've configured the global audit trail logging group policy, that policy's registry setting is as follows, for your information:

`HKEY_LOCAL_MACHINE > SOFTWARE > Policies > Centrify > AuditTrail > AuditTrailTargets`

If you've configured both a manual, local setting and a group policy for global audit trail logging, the group policy settings take precedence.

• • • • • •

Configuring the global audit event logging location manually on UNIX systems

To manually specify the target for audit trail information on a UNIX computer, edit the audittrail.targets setting in the centrify.conf file.

The options for the audittrail.targets parameter is as follows:

- 0 (audit trail is disabled)

- 1 (the audit trail log goes to DirectAudit)

- 2 (the audit trail log goes to the UNIX syslog)

- 3 (the audit trail log goes to both DirectAudit and the UNIX syslog)

The default value for the audittrail.targets parameter is 3 (syslog and DirectAudit). If you're running DirectAudit version earlier than 3.2, the default value is 2 (syslog only).

Which events are only in Centrify Audit & Monitoring Service

Audit events may come from Centrify Authentication Service, Centrify Privilege Elevation Service, or Centrify Audit & Monitoring Service. If you are using only authentication and privilege elevation, the following events will not be available to you as they are from audit and monitoring service:

- All the audit events from the following categories:
  - Audit Analyzer
  - Audit Manager
  - Command
  - Centrify Audit & Monitoring Service - Windows
  - Centrify Audit & Monitoring Service System Management
  - Centrify Audit & Monitoring Service UNIX Agent
  - Centrify Audit & Monitoring Service advanced monitoring
- The following audit events from the category Centrify Commands
  - Auditing enabled (Centrify Event Id 18000)
  - Auditing not enabled (Centrify Event Id 18001)

- Auditing disabled (Centrify Event Id 18100)
- Auditing not disabled (Centrify Event Id 18101)

• • • • • •

Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service audit events

For each category of authentication, privilege elevation, and audit and monitoring services audit events, this chapter provides the following:

- An overview

- A log sample

- An explanation of the sample for all authentication, privilege elevation, and audit and monitoring services audit events for log in and privilege activity on Windows, UNIX, and Linux computers

- A listing of all Centrify audit event IDs in the specified category

If you are using the Audit Analyzer console to view audit events, you cannot individually access the audit events documented in this chapter. The audit events are grouped into Audit Analyzer categories.

Note: Instead of querying audit event categories, you can query a day's worth of audit events in the Audit Analyzer console to review all audit events for the day.

• • • • • •

Audit Analyzer

The Audit Analyzer console is a graphical user interface that administrators can use to query and review captured user sessions. The Audit Analyzer is available with the Centrify Audit & Monitoring Service. The Audit Analyzer events focus on session modification.

Audit Analyzer audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 3001. This log sample documents a session being deleted. The change was made by user=administrator@centrify.vms on April 20, 2016 at 05:51:01.

Audit Manager

Audit Manager is a Microsoft management console (MMC) that you can use to configure and manage the deployment of audit components, such as audit stores and audit store databases, audit roles, collectors, and agents. Audit Manager is available with Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service. Audit events generated by Audit Manager primarily involve the installation and configuration of auditing components such as management databases, audit stores, and audit store databases, and changes to audit role and user permissions.

Audit Manager audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 12200. This log sample documents enabling video capture in a Centrify Audit & Monitoring Service installation. The change was made by user=dwirth@centrify.vms on April 21, 2016 at 11:17:35.

Centrify Commands (UNIX commands)

Audit events in the Centrify Commands category are focused on capturing command line activity. Audit events are recorded when users or administrators run command line programs to enable or disable auditing, join or leave a

• • • • • •

domain, query Active Directory for user or group information, change their password configuration settings or license mode, or perform other operations.

Centrify Command audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 18000. This log sample documents auditing being enabled. The change was made by user=root on April 5 at 11:37:28.

```

Centrify Configuration

Centrify hierarchical zones are used to enable information about non-Windows computers, user profiles, access rights, and roles to be stored in Active Directory. Hierarchical zones can be used to segregate and perform privilege management on both UNIX/Linux and Windows systems. These configuration audit events focus on zones, computers, groups, users, rights, and roles.

Centrify Configuration audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 36101. This log sample documents a user giving zone administrative tasks to another user. The change was made by user=dwirth@centrify.vms on April 19, 2016 at 03:01:04.

		type: user type
		status: failed
		ZoneUser: unixname
		zone: zone name
		reason: error message
37511	Local user added to a computer	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: succeeded
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name
37512	Add local user to a computer failed	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: failed
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name

Centrify Configuration audit events

Centrify Event Id	Description	Parameters
		reason: error message
37513	Local user deleted from computer	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: succeeded
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name
37514	Delete local user from a computer failed	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: failed
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name
		reason: error message
37515	Local user profile modified on a computer	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: succeeded
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name
37516	Modify local user on a computer failed	PID: process id
		user: username@domain

Centrify Configuration audit events

Centrify Event Id	Description	Parameters
		RunAs: username@domain
		type: user type
		status: failed
		ZoneUser: unixname
		computer: computer hostname
		zone: zone name
		reason: error message
37521	Local group added to a zone	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: succeeded
		group: group name
		zone: zone name
37522	Add local group to a zone failed	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: failed
		group: group name
		zone: zone name
		reason: error message
37523	Local group deleted from a zone	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: succeeded
		group: group name
		zone: zone name

Centrify Configuration audit events

Centrify Event Id	Description	Parameters
37524	Delete local group from a zone failed	PID: process id user: username@domain RunAs: username@domain type: user type status: failed group: group name zone: zone name reason: error message
37525	Local group profile modified in a zone	PID: process id user: username@domain RunAs: username@domain type: user type status: succeeded group: group name zone: zone name
37526	Modify local group in a zone failed	PID: process id user: username@domain RunAs: username@domain type: user type status: failed group: group name zone: zone name reason: error message
37531	Local group added to a computer	PID: process id user: username@domain RunAs: username@domain type: user type status: succeeded group: group name computer: computer

Centrify Configuration audit events

Centrify Event Id	Description	Parameters
		hostname
		zone: zone name
37532	Add local group to a computer failed	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: failed
		group: group name
		computer: computer hostname
		zone: zone name
		reason: error message
37533	Local group deleted from a computer	PID: process id
		user: username@domain

		status: succeeded
		group: group name
		computer: computer hostname
		zone: zone name
37534	Delete local group from a computer failed	PID: process id
		user: username@domain
		RunAs: username@domain
		type: user type
		status: failed
		group: group name
		computer: computer hostname
		zone: zone name
		reason: error message

Centrify Configuration audit events

Centrify Event Id	Description	Parameters
37535	Local group profile modified on a computer	PID: process id user: username@domain RunAs: username@domain type: user type status: succeeded group: group name computer: computer hostname zone: zone name
37536	Modify local group for a computer failed	PID: process id user: username@domain RunAs: username@domain type: user type status: failed group: group name computer: computer hostname zone: zone name reason: error message

Centrify sshd

Centrify sshd is Centrify's enhanced version of OpenSSH. This software program uses the secure shell protocol to connect to a remote computer. Centrify sshd audit events identify DZ SSH rights and SSHD activities.

Centrify sshd audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 27000. This log sample documents the rights granted to the DZ SSH shell client. The change was made by user=dwirth(type:ad,dwirth@CENTRIFY.VMS) on April 4 at 01:04:15.

• • • • • •

```
Apr 4 21:04:15 engcen6 adclient[1749]: INFO

Command (Audited and successfully executed commands)

Command audit events are recorded when Centrify UNIX command-line programs are used on Centrify-managed computers. Centrify UNIX command audit events focus on the execution success or failure of the audited command.

Command audit event log sample

```
Nov 26 00:32:01 Eason adclient[31118]: INFO
AUDIT_TRAIL|Centrify Suite|Command|1.0|100
|Audited command is executed|5|user=root
pid=31937 utc=1416979921469 centrifyEventID=48100

-44ff-a5f6-d3f53f09bb67 status=SUCCESS
command=/bin/ls -l data.txt
```

Command audit events

Event Source Category: Command

Centrify Event Id	Description	Parameters
48100	Audited command is executed	command: command
48101	Audited command fails to be executed	command: command reason: error message

Centrify Audit & Monitoring Service advanced monitoring

If you have enabled Centrify Audit & Monitoring Service for advanced monitoring, you can generate data for three additional auditing reports, as follows:

- Monitored execution report: This report shows the monitored commands being executed on the audited machines—including information on commands that are run individually or as part of scripts.

• • • • • •

- Detailed execution report: This report shows all of the commands being executed on the audited machines—including commands that are run as part of scripts or other commands.

- File monitor report: This report shows the sensitive files being modified by users on the audited machines.

Advanced monitoring audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 57300. This log sample documents a session where a user attempted to modify a monitored file. The change was made by `root@al_rhel6_2.altest.centrify.com` on November 2, 2016 at 06:09:01.

```

Centrify Audit & Monitoring Service System Management

The auditing module's detailed, real-time auditing of privileged user sessions on Windows, UNIX, and Linux systems provides a full accounting of user activity and system access. Centrify Audit & Monitoring Service System Management is available with Centrify Audit & Monitoring Service. The audit

• • • • • •

and monitoring service audit events focus on collector service, collector settings, and agent settings.

Centrify Audit & Monitoring Service System Management audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 42251. This log sample documents the successful start of the collector service on computer 'MEMBER'. The change was made by user=system@nt authority on April 05, 2016 at 14:59:56.

```

Centrify Privilege Elevation Service – Windows

Centrify Privilege Elevation Service for Windows provides role-based access control for Windows desktops and applications, and to remote Windows servers. Centrify Privilege Elevation Service for Windows audit events focus on successful and failed local console and remote log in attempts, administrative activity using desktop or application privileges, network access to remote servers, changes to the zone information for Windows computers and changes to role information for Windows users.

Centrify Privilege Elevation Service Windows audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 6029. This log sample documents a user with local and network role privileges launching a `.msc` file.

```

dzdo

For Linux and UNIX computers, Centrify Authentication Service, Privilege Elevation Service, and Audit & Monitoring Service includes authorization services that enable users to run with elevated privileges using the dzdo command line program. The dzdo program is similar to sudo except that, instead of using a sudoers configuration file, the program uses the role-based access rights for zones stored in Active Directory.

License Management

Auditing licenses are issued for each computer that will be connected to an auditing collector, and are managed by the Centrify Licensing Service. You can use the Licensing Service control panel as described in the License Management Administrator's Guide to add and remove licenses, monitor license usage, and configure license usage notification.

License management audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 20101. This log sample documents a user being denied an `adjoin` command execution due to missing license information. The change was made by user=root on October 27 at 17:24:25.

Kerberos

Audit events in the Kerberos category are focused on the success or failure of kerberos credential access. Audit events are recorded when programs access the KCM (Kerberos Cache Manager) credential cache.

Multi-factor Authentication

Multi-factor authentication (MFA) strengthens security by requiring users to provide more than one form of identification to authenticate their identity when they attempt to access servers or applications. Multi-factor authentication challenges might require users to type a password, respond to an email

message or phone call, enter a passcode, or answer a security question. Audit events in the MFA category focus on the success and failure of MFA challenges.

MFA audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 54100. This log sample documents the success of an MFA challenge. The change was made by user=laniu1(type:ad,laniu1@SINGLE01.CDC) on April 20 at 14:51:18.

```

Trusted Path

The trusted path configuration parameter (audittrail.Centrify_Suite.Trusted_Path.machinecred.skipda) specifies whether trusted path audit trail events are sent to the audit installation database in situations where the user is using a computer credential. The audit events identify a granted and denied Trusted Path.

Trusted Path audit event log sample

The following is a sample of an audit event log for Centrify Audit Event ID 23700. This log sample documents a Trusted Path being granted. The change was made by user=newcentos$@CENTRIFY.VMS on April 04 at 21:02:09.

• • • • • •

```
Apr 4 21:02:09 newcentos adclient[1395]: INFO AUDIT
