Centrify® PuTTY 5.7.0 (Release 2020) Release Notes

Table of Contents

1. About This Release

PuTTY is a popular open-source client on Windows and UNIX-based computers that provides access to remote machines using well-known network protocols such as Telnet, SSH, rlogin and raw TCP. However, it does not support Kerberos authentication.

Centrify has enhanced PuTTY so that user authentication can be accomplished using Kerberos before establishing a remote connection. The Centrify-enhanced version of PuTTY takes advantage of the Kerberos environment that the Centrify DirectControl agent sets up automatically on managed UNIX and Linux computers. By using the Centrify PuTTY client to access Centrify-managed computer, you gain the benefits of centralized authentication and password policy enforcement using a secure and well-established authentication infrastructure.

Centrify PuTTY is currently integrated with open source PuTTY version 0.73.

The Centrify Zero Trust Privilege Services and PuTTY release notes and documents are available online at http://docs.centrify.com.
